Experiment - 12

End to end communication at transport layer

Aim :

To implement an echo client server using TCP / UDP socket Programming

a) Echo - client - server using TCP / UDP

a socket is an endpoint used for communication between two device. In echo Program, the client sends a message

Procedure :

1) create Server Program, client Program
2) Import the required socket Library
3) In server, create a socket and bind it and IP address Port no
4) Make the server listen to client request
5) Start client and connect it server the client recieves and display the echoed msg

b) client servers using Socket Program

1) Create server and client Program using Socket Programming

2) Start Servers and bind it IP address and Port

3) Make servers wait for client connection

4) The server recieves and display msg

5) The server sends reply back to client

6) continue sending and recieving msg to Perform a chat

Result :

The end to end communication was Successfully implemented using TCP / UDP Sockets
