Experiment 13

Implement your own Ping Program

Aim :

To implement a simply Ping Program to check connectivity two network

Theory :

Ping is a network utility used to check whether a destination device is reachable through network. It Sends a request to destination and waits for reply

Requirements :

* Compiler
* Python / Suitable Programming
* Network connection

Procedure :

1) Create a new Program for implementation Ping Operation

2) Import required Socket / Network Library

3) Get IP address or hostname of

of the destination

4) Send Packet to destination

5) If response is received, display destination

6) Display the result and close the connection

Algorithm:

1) Start

2) Entire destination IP address

3) Create a socket

4) Send Ping request

5) wait for response

6) Otherwise display host is unreachable

Result:

Thus, the Ping program was successfully implemented
