EXP : 2 Learning and Assignment of IP Address Manually to computers

Aim :

To learn how to assign an IP address manually to computer and verify network connectivity.

Steps :

* Turn on the computer and connect it to the network using LAN cable
* Open Control Panel
* Click Network and Internet
* Select Network and Sharing Center
* Click Change adapter Settings from the left Panel.
* Right-Click Ethernet or Wi-Fi if using wireless and Select Properties
* Select Internet Protocol Version 4 (TCP / IPV4) and click Properties
* Choose Use the following IP address
* Enter the required network details
  i) IP Address : 192.168.1.10
  ii) Subnet MASK : 255.255.255.0

iii) Default Gateway : 192.168.1.1

* Enter the DNS Server details
  i) Preferred DNS Server : 8.8.8.8
  ii) Alternate DNS Server : 8.8.4.4
* Click OK, then close to save the settings
* Open Command Prompt.
* Type the following command and Press Enter :

  ipconfig

* Verify that assigned IP address is displayed correctly
* Test the network connection by typing :

  Ping 192.168.1.1

* If replies are recived successfully, the manual IP configuration is correct

Result :

The IP address was assigned manually to the computer successfully, and network connectivity was verified using ipconfig and Ping commands.
