Experiment 5

Packet capture tool wireshark

Aim :

To capture and analyse network Packet using the wireshare Packet capture tool and apply filter for TCP, UDP, DNS HTTP etc...

wireshark :

wireshark a network analysis tool formerly known as ethereal, captures Packets real time human readable format, wireshark includes filters, color coding and other features that let you dig deep your network or troubleshoot network Problems

Capture the Packets :

Step1 : Open the wireshark application

Step2 : Select the active network interface such as ethernet

Step 3 : Double click the selected interface to start Packet capturing

Step4 : Observe the Packet appearing in the Packet

Step 5 : Allow wireshark to capture Packet for few sec

Step6 : Click the stop button to stop Packet capturing

Step 7: observe the captured Packet and their details

Step: 8 : Take Screenshot of captured Packet

Filtering the Packet :

Step 1 : click the display filter box at the top of the wireShark window

Step 2 : Enter the required Protocal filter

Step 3 : Press enter to apply filter

Step 4 : wireShark displays belonging to the Selected Protocol

Step 5 : Repeat the Process for different Protocol

Result :

The network Packet were successfully captured and saved using wireshark the captured Packed were successfully filtered based on diff Protocols
