Experiment - 8

NMAP to Discover Live Hosts using NMAP Scans

Aims:

To discover live hosts on a network using Nmap host - discovery scans ARP scan, ICMP scan and TCP, UDP Ping scan - and to understand which Protocol.

Nmap:

Nmap is a free open-source network scanning tool created by Gordon Lyon and first released

Procedure:

1) Log into TryHack and open the Nmap Live Host Discovery room

2) Work through tasks 1-3 and answer the simulator based question

3) Deploy lab network Task 4 and start attackbox note target subnet

4) Run ARP Scan - PR < subnet > /24 record many host respond

5) Run ICMP timestamp and IMP address

6) Run TCN SYN (PS) TCP ACK, UDP scan

7) Complete the knowledge check and Proceed to Nmap Base Port Scan room

Result:

Thus nmap host discovery scan were performed successfully using TCP, SYN, FCP, UDP Ping technique the scan result network traffic were observed.
